Welcome To Swastik Gum Industries (India)

At Swastik Gum Industries (India), we're committed in giving our customers exceptional service and we are uncompromising in our efforts to ensure that we deliver a quality product every time. We adhere to stringent quality practices controlling all parameters at each and every stage from processing, packing and delivery.

The history of the Company can be traced back to 1973, when the current owners set up business in India, starting with the export of Spices & now are engaged in sectors of Food Ingredients such as Gluten Free Rice flour, Guar Gum Powder, Spices, Steam Sterilized Curry powder & Salt & Cattle Feeds such as Guar Meal & Its Variants, Barley, Rapeseed meal & Textile Printing Thickeners such as Tamarind Kernel Powder & Guar Gum Powder.

Started in 1973 by Shri Velji Hirji Kataria, Swastik Gum Industries (India) has come a long way. Swastik Gum Industries (India) is currently run by the next generation of Kataria family viz. Mr. Kantilal Bhanushali, Mr. Mahesh Kataria & Mr. Mohan Kataria. The Kataria family is in the field of Exports since SIX DECADES. Our longevity is evidence of our financial stability and the trust our Customers, Suppliers and Service Providers place in us.

| GUAR GUM POWDER |

Gum is derived from guar seeds or *Cyamopsis tetragonoloba* termed as Guar Gum. Guar Gum can also be termed as guaran. These seeds have high low-shear viscosity as evaluated with other hydrocolloids like (locust bean gum). Guar Gums are effective thickeners and stabilizers.

Guar Gum is relatively cost effective as compared to other thickeners and stabilizers along with it being an effective binder, plasticizer and emulsifier. One of the important properties of guar gum, a polysaccharide, is that it is high on galactose and mannose. Guar gum is also known as guarkernmehl, guaran, goma guar, gomme guar and galactomannan.

| Applications |

Food , Bakery , Petfood , Pharmaceuticals , Water Treatment
Mining , Feed Industry , Nutraceuticals , Tobacco Industry
Textiles Industry , Oil Drilling

| GLUTEN FREE - RICE FLOUR |

Rice has been a staple food source around the world for centuries, especially in eastern cultures. Rice is eaten by over half of the world population and provides 20% of the world's dietary energy supply. Rice is a valuable source of energy, as well as carbohydrates, potassium and thiamin.

Rice flour is primarily made from polished broken rice. Rice flour, sometimes called rice powder, is made from finely milled white raw rice and is used to make fresh rice noodles and sweets. It is also used to thicken coconut milk to a rich, smooth and creamy consistency. The rice flour is easily available in most Asian markets. Rice flour has previously been used in food products for baby foods. Today the rice flour has extensive use in many recipes. Rice flour is being used in cereals, crackers, chips, snacks, and coating applications to provide different textures.

| Applications |

Baby Food , Bakery , Snacks , Meat Coating , Sausages

| FAST HYDRATION GUAR GUM POWDER |

Fast Hydrating Slurriable Guar

The natural fast hydrating and slurriable guar is a non ionic guar, polymeric viscosifier that is slurriable up to 50 percent of solids in systems such as diesel fuel. In aqueous systems, its main use is in the stimulation of oil and gas wells as a fracturing fluid. This yields excellent pump ability, good hydration, good thermal stability and excellent shelf life. It can be typically cross linked with borates and once cross linked it exhibits excellent carrying capacity to support sand or other proppants to be placed in the created fracture. The viscosity of hydrating slurriable guar can be reduced or broken by using enzymes, oxidizers or acids such as HCL

| Applications |

Mud Drilling , Oil & Gas Drilling
Water Drilling , Geological Drilling

| ROASTED GUAR KORMA |

Guar Meal is a natural animal feed but is also used as binder for other feeds. It typically comes in two forms: Guar Meal Churi (Hull) and Guar Meal Korma (Germ).

The Guar seed constitutes of hull, germ and endosperm in the following proportion

Hull (Churi)	14 to 17%
Germ (Korma)	40 to 47 %
Endosperm (Gum)	35 to 42%

Guar gum is derived from the endosperm and this process leaves behind a residual mass leftover called guar meal. Primarily, Guar seed is split, yielding mainly endosperm along with a high protein germ fraction and marginally

| Applications |

Poultry , Dairy Animals , Aqua Feed

| CASSIA GUM POWDER |

Cassia tora powder made from cassia tora seeds and cassia tora splits are some ancient natural ingredients. In India, cassia tora is used as a natural pesticide in organic farms. Roasted seeds are substituted for coffee, like tephrosia seeds. Cassia tora powder is most popularly used in the pet-food industry. It is mix with guar gum for use in mining and other industrial application.

Cassia gum is the purified flour from the endosperm of the seeds of Cassia tora and Cassia obtusifolia which belong to the leguminosae family. Seeds of Cassia occidentalis are a naturally occurring contaminant in the source material. The intended use of Cassia gum is as thickener, emulsifier, foam stabilizer, moisture retention agent and/or texturizing agent in cheese, frozen dairy desserts and mixes, meat products and poultry products. Cassia gum is combined with other hydrocolloids such as Carrageenan or Xanthan gum, they will synergistically form gels with unique properties.

| SORGHUM FLOUR |

Sorghum originated in Africa thousands of years ago, and then spread through the Middle East and Asia via ancient trade routes, travelling to the Arabian Peninsula, India and China along the Silk Road. Today sorghum remains a staple food in India and Africa, and is growing in popularity in America. The whole grain kernel is ground into flour that can be used for cooking and baking.

Sorghum flour is a powerhouse of nutrition and adds a superb flavor to gluten-free baking. It is high in protein, iron, and dietary fiber, making sorghum flour welcome in pantries around the world. Sorghum flour is high in antioxidants, which support cardiac health. In addition, the starch and protein in sorghum take longer than other similar products to digest. This slow digestion is particularly helpful for those with diabetes.

| Applications |

Confections , Snacks , Smart FRY Frying Flour , Baked
